

The IsatHub terminal provides satellite broadband data, voice and SMS connectivity for your smart device, via Wi-Fi, for connectivity outside of terrestrial mobile coverage areas. The lightweight, portable terminal offers fast connectivity via satellite at speeds of up to 240/348kbps, plus a dedicated voice line and SMS capability. When connecting to the reliable Inmarsat with near-global coverage with Pivotel, the IsatHub comes with a standard "04" Australian mobile number, helping to further reduce the operational costs of staying connected anywhere in Australia.

FEATURES

-  Near-global coverage keeps you connected worldwide, apart from the Poles
-  Lightweight and highly portable - Wi-Fi range of up to 30 m
-  Satellite broadband data, voice and SMS
-  Access satellite connectivity via the Control and Voice Apps
-  Full control over access and visibility of data usage via the Control App

WHY PIVOTEL?

- Standard 04XX mobile numbers
- No complex dialing rules with low satellite call rates
- Manage your satellite data terminals and control your costs with Pulsar® Portal

COVERAGE

With near global coverage and 30+ years experience, Inmarsat's renowned network provides reliable satellite services for voice, data and M2M services.
